Introduction to Machine Learning

Machine learning is a branch of artificial intelligence.

It allows computers to learn patterns from data.

Machine learning models improve their performance through experience.

Supervised and Unsupervised Learning

Supervised learning trains models using labeled examples.

Classification and regression are supervised learning tasks.

Unsupervised learning finds patterns in unlabeled data.

Clustering is a common unsupervised learning technique.

Deep Learning and Applications

Deep learning is a subset of machine learning.

It uses neural networks with multiple layers.

Applications include image recognition, speech recognition, and prediction.
